

[NEW RELEASE] Remote Desktop Manager 14 is Now Available!

THERE ARE SO MANY NEW THINGS IN RDM 14

As the calendar shifts to September, people in the Northern Hemisphere are preparing for fall and winter, people in the Southern Hemsphere are preparing for spring and summer, penguins in Antarctica are marching around (to avoid all of the documentary filmmakers), and here at Devolutions we are preparing for what is our favorite season of the year: UPDATE SEASON.

And what better way to get things started by announcing that the much-anticipated version 14 of <u>Remote Desktop</u> <u>Manager</u> is here!

It's Been a While...

Yes, it's been a while since we released RDM 13. But that doesn't mean that we've been spending out time <u>playing</u> <u>foosball</u> or increasing our <u>Star Wars knowledge</u>. Since launching RDM 13, we've released a whopping <u>21 updates</u>.

And as you hopefully know, our major updates aren't small things. Like, if we change the color of a button from dark blue to light blue, we don't throw an update party and launch a press release.

Most of our updates have 100+ additions, improvements and fixes. And if you'd like proof, please check out the <u>RDM</u> <u>Release Notes page</u>. You better bring something to eat and get one of those comfortable ergonomic office chairs, because it's a long page!

What's New in RDM 14

There are so many new things in RDM 14, that if I listed them all this blog post would be more like a book. That's why I asked our <u>Hubert</u>, one of our amazing Remote Desktop Manager Developer Specialists, to highlight his favorites.

According to Hubert, here are just some of the exciting new features that you can look forward to in RDM 14:

- SQL Azure MFA support
- New documentation search through pages linked to an entry
- Azure AD (Office 365) authentication support (Devolutions Password Server required)
- Improvements for MySQL and MariaDB support now including repository, documentation and favorites
- New Repository manager role
- Google Drive now available as a data source
- New Execute user permission which allows specific users to open an entry
- New 1Password OPVault & 1Password Web support
- Integration for Password Safe by Mateso
- Live edit for FTP, SFTP, SCP, WebDAV, Google Drive, S3 storage and Azure Storage now available
- Pwned password check integration

If you want to see the full list, then once again, I invite you to check out the <u>RDM Release Notes</u> page (and after you've finished reading them, you can be glad that you aren't responsible for updating that page — it's not an easy job!).

Gett Remote Desktop Manager 14 Now Getting RDM 14 is easy. Here are your options:

• If you have an active PDM Enterprise license, then you'll be prompted to upgrade to P

- If you have an active RDM Enterprise license, then you'll be prompted to upgrade to RDM 14 the next time that you log in. If you want to get it right now, then visit: <u>https://remotedesktopmanager.com/Home/Download.</u>
- If your RDM Enterprise license has expired, then now is the ideal time to renew! Remember, you get lots of extras, including software maintenance and support. You can purchase a license in our online store or send an email to sales@devolutions.net and our sales team will take care of you.
- If you're new to RDM welcome aboard! You can try RDM 14 Enterprise for 30 days. After that time, if you wish you can purchase a license, or downgrade to RDM Free and continue using it for as long as you wish. You can also request a free trial <u>here</u>.

Unleash the full Power of RDM with Devolutions Password Server and Wayk Now

One thing we know at Devolutions, is that IT pros really like it when their tools are centralized. This makes perfect sense, because centralized tools are more efficient. And when work is more efficient, there is more time to take care of tasks — and less chance of having to work overtime (but just in case you do, remember that all of our products have mobile clients, so you can still be productive while sitting on your patio or going to your kid's soccer game).

I mention this, because one of the best ways to be more efficient is by integrating RDM with Devolutions Password Server (DPS) and Wayk Now.

With <u>Devolutions Password Server</u>, you can easily vault, manage and control acess to privileged accounts and business user passwords. Plus, DPS's web interface is very simple and easy for end users, which is great if some of your colleagues aen't very "technicaly literate". They'll love using DPS, and you'll love the enhanced governance and control. Everyone wins!

<u>Wayk Now</u> lets you securely and easily take control of a remote computer, or let an authorized remote user take control of your system. When integrated with RDM, Wayk Now supports easy management, scalability and increased efficiency through a single, unique platform for all remote sessions.

Ready to add the power of DPS and Wayk Now to your RDM arsenal? Then try Wayk Now Enterprise <u>here</u>, and request a free 30-day trial of DPS <u>here</u>. By unleashing the full power of RDM, you won't just be an IT star. You'll be an IT LEGEND!
