

## [VIDEO] New Remote Desktop Manager Integration with Keeper®

---

**OUR BIGGEST CONCERN IS THAT YOUR  
CREDENTIALS ARE SAFELY STORED**

---

One of [Remote Desktop Manager's](#) greatest characteristics is its ability to integrate with a wide variety of existing technologies, giving IT pros like you the power to control the IT chaos in your environment. Here at **Devolutions**, we love the challenge of integrating the tools you use every day, and at the same time, we really enjoy working with external vendors to make these integrations a reality for you.

With this in mind, one category of tool that we are very familiar with and especially love to integrate is password managers, because — let's be honest — storing passwords in an Excel spreadsheet is tedious, insecure, and SO 1998, like finding an [AOL CD-Rom](#) in the mail or [Gettin' Jiggy Wit It](#). But all joking aside, our biggest concern is that your credentials are safely stored. Whether you use one of our solutions like [Devolutions Hub](#) or [Devolutions Password Manager](#), or another great password manager, our mission is to make sure your preferred password manager plays nice with our products.

Today, I am pleased to announce that Remote Desktop Manager is now fully integrated with Keeper, the excellent password manager from the good folks over at [Keeper Security](#). Working with the team over there has been a blast, and it has allowed us to expand the capabilities of **RDM** by offering you yet another excellent credential management solution. If you still haven't found a good password manager that works well with **RDM**, then I recommend [checking out keeper](#).

## What Is Keeper?

In case you're unfamiliar with it, Keeper is a cloud-based password manager that takes away the complexity of managing passwords, and it provides you with a solution that is easy-to-use and also highly secured. It is designed with both users and teams in mind, and it features simple credential sharing, a secure chat system, and a browser extension for auto-filling credentials into websites. Keeper also offers enterprise-grade features like dark web monitoring, account takeover protection, and role-based access controls for organizations that need greater protection. For more information on what Keeper has to offer, visit their website at [keepersecurity.com](#).

### From Keeper Security's CTO and Co-Founder, Craig Lurey

*"Working with the people at Devolutions has truly been a pleasure, and we are excited about integrating Keeper with Remote Desktop Manager."*

Thank you, Craig — and the feeling is mutual!

## New Video Tutorial!

To make your life even easier, we've created a new video tutorial that shows you step-by-step how to integrate Remote Desktop Manager with Keeper.
