

## Wayk Now Improvements

### *Devolutions*

---

Our development team has been busy with some improvements to Wayk Now, our instant remote support and remote desktop tool.

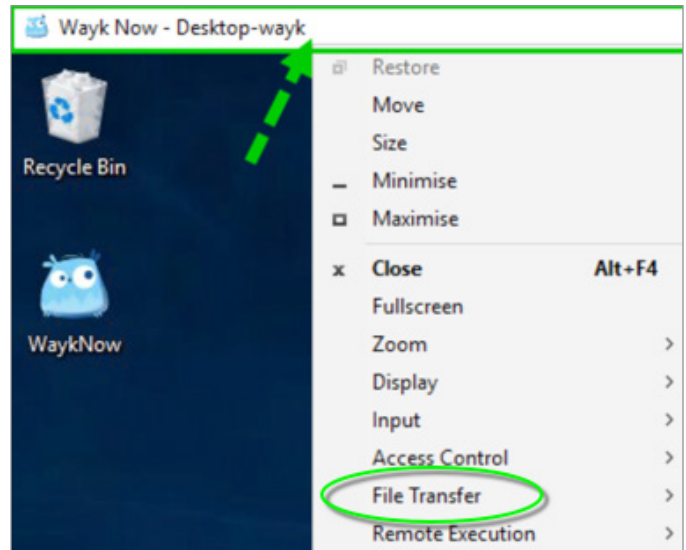

**Here's an update on two of my favorite new features:**

---

## File Transfer

The new [file transfer](#) feature lets you send or receive files between computers. You can also transfer multiple files from both sides simultaneously, which makes things even faster and easier.

You'll find the **File Transfer** option on the **Session** menu (client), or the **Sharing** menu (server).

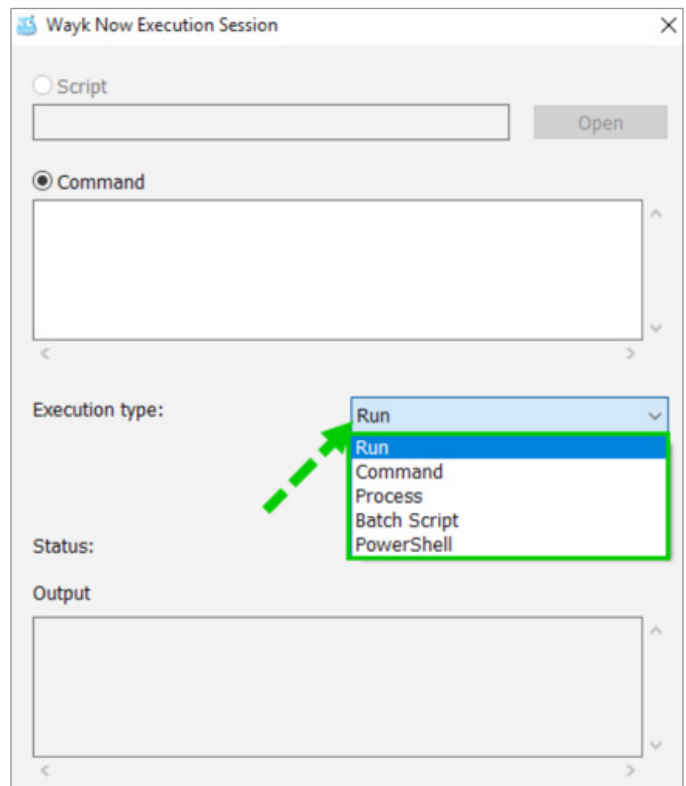

## Remote Execution

We've also added a [remote execution](#) feature, which lets you execute multiple types of commands and scripts on a remote computer. This great new feature must be enabled in the [Access Control](#) section of the **Session** menu. Here's what to do:

- From the **Session** menu, select **Remote Execution**, and then select **Execute Dialog**.
- In the **Wayk Now Execution Session** window that appears, choose the type of execution that you wish

Please note that the list of available execution types depends on the platform the Wayk Now Server is running on..

## There's More to Explore...

There are more new features in [Wayk Now](#) that are waiting for you to explore — so if you haven't tried it yet, what are you waiting for? It's free for personal use or you have a 30-day free trial for Wayk Now Enterprise. Give it a spin, and if you're like me you'll fall in love with it. In a complex world, it's just so easy to use!

## Tell Us What You Think

As always, please let us know your thoughts by using the comment feature of the blog. You can also visit our forums to get help and submit feature requests, you can find them [here](#).
